

TRAINING GUIDE

WC-100 TECHNICAL DOCUMENTATION AND REVISION CONTROL

TRAINING GUIDE FOR ENGINEERING, MANUFACTURING AND QUALITY USERS

Document Number: TR-WC-100-001
Revision: A
Document Status: Demonstration Document
Document Type: Training Guide
Training Topic: Technical Documentation and Revision Control
Primary System: Teamcenter
Target Audience: Engineering, Manufacturing, Quality and Documentation Teams
Prepared By: Technical Documentation
Effective Date: 30 August 2026

DOCUMENT CONTROL

Field	Details
Document Number	TR-WC-100-001
Document Title	WC-100 Technical Documentation and Revision Control
Document Type	Training Guide
Training Topic	Technical Documentation and Revision Control
Primary System	Teamcenter
Target Audience	Engineering, Manufacturing, Quality & Documentation
Revision	A
Status	Demonstration
Effective Date	30 August 2026

Training Duration Approximately 45–60 minutes

IMPORTANT NOTICE

This Training Guide is an independently created technical writing demonstration for a professional portfolio.

WC-100 is a fictional product and all product information, workflows, examples and scenarios have been created solely for demonstration purposes.

The Teamcenter terminology and workflows presented here are generic and may differ from an organisation's actual Teamcenter configuration, software version, permissions and processes.

This guide is not an official Siemens Teamcenter training course or product manual.

TABLE OF CONTENTS

1. Training Overview
2. Training Objectives
3. Target Audience
4. Prerequisites
5. Training Structure
6. Key Concepts
7. Why Revision Control Matters
8. Technical Documentation Lifecycle
9. Teamcenter and Document Control
10. Finding Controlled Documentation
11. Identifying the Current Revision
12. Understanding Lifecycle Status
13. Documentation Review Process
14. Creating a Documentation Change
15. Review and Approval Workflow
16. Practical Exercise 1 — Find a Document
17. Practical Exercise 2 — Verify a Revision
18. Practical Exercise 3 — Identify an Obsolete Document
19. Practical Exercise 4 — Process a Documentation Change
20. Knowledge Check
21. Common Mistakes

- 22. Troubleshooting
 - 23. Trainer Guidance
 - 24. Learner Assessment
 - 25. Quick Reference
 - 26. Post-Training Checklist
 - 27. Related Documentation
 - 28. Revision History
-

1. TRAINING OVERVIEW

1.1 Purpose

This training guide introduces users to the principles of controlled technical documentation and revision management within a product lifecycle environment.

The training uses the fictional WC-100 Industrial Wear Component as a practical example.

Participants learn how to:

- Find technical documentation.
 - Verify document identity.
 - Identify the current revision.
 - Understand document lifecycle status.
 - Recognize obsolete information.
 - Follow a controlled documentation workflow.
 - Understand the roles of technical writers and Subject Matter Experts.
 - Support documentation changes through review and approval.
-

2. TRAINING OBJECTIVES

At the end of this training, participants should be able to:

Objective 1 — Locate

Find a required technical document using a document number, product number or keyword.

Objective 2 — Identify

Identify the correct document using title, document number and product information.

Objective 3 — Verify

Confirm the revision and lifecycle status before using technical information.

Objective 4 — Understand

Explain why revision control is important in engineering and manufacturing environments.

Objective 5 — Apply

Follow a basic documentation review and change workflow.

Objective 6 — Recognize

Identify common documentation-control errors.

Objective 7 — Escalate

Know when an information conflict or technical issue should be referred to an SME or document owner.

3. TARGET AUDIENCE

This training is designed for personnel who interact with technical documentation.

Engineering

Users who create, review or consume product and engineering information.

Manufacturing

Users who require current work instructions, specifications and process documentation.

Quality

Users who verify controlled information, inspection requirements and traceability.

Technical Documentation

Users responsible for creating, maintaining and publishing technical content.

Project Teams

Users who need to coordinate documentation deliverables during engineering or manufacturing projects.

4. PREREQUISITES

Participants should have:

- Basic knowledge of their functional area.
- Familiarity with technical documentation.
- Access to the appropriate training environment.
- Basic understanding of document numbers and revisions.
- Appropriate Teamcenter access where practical exercises are performed.

No advanced Teamcenter knowledge is required for this introductory training.

5. TRAINING STRUCTURE

The training follows a simple learning sequence:

Understand

↓

Demonstrate

↓

Practice

↓

Check

↓

Apply

The training combines explanation, examples, guided exercises and knowledge checks.

6. KEY CONCEPTS

Before beginning the practical activities, participants should understand the following concepts.

6.1 Controlled Document

A document maintained through an approved process that provides control over its creation, review, approval, revision and distribution.

Examples:

- Product Specification
 - Technical Manual
 - Work Instruction
 - SOP
 - User Guide
 - Training Guide
-

6.2 Revision

A controlled update to an existing document.

Example:

Revision A → Revision B

A revision may result from:

- Engineering change
- Process change
- Product improvement
- Correction
- Regulatory requirement
- User feedback

6.3 Lifecycle Status

Lifecycle status indicates where a document is within its controlled lifecycle.

Example:

Draft → Review → Approved → Released → Obsolete

Actual lifecycle states vary by organisation.

6.4 Subject Matter Expert

An SME is a person with the technical knowledge required to validate the accuracy of the information.

Examples:

- Engineer
- Manufacturing specialist
- Quality specialist
- Product expert
- System specialist

The technical writer communicates the information clearly; the appropriate SME validates technical accuracy.

7. WHY REVISION CONTROL MATTERS

Imagine a manufacturing team has access to two versions of a work instruction.

Revision A

Mounting clearance:

10 mm

Revision B

Mounting clearance:

15 mm

If the team uses Revision A after Revision B has been released, the wrong technical information may be applied.

This can lead to:

- Rework
- Production delays
- Quality issues
- Incorrect assembly
- Safety concerns
- Customer dissatisfaction

Effective revision control helps ensure that users have access to the correct information.

8. TECHNICAL DOCUMENTATION LIFECYCLE

A controlled technical document may follow this lifecycle:

Planning

↓

Authoring

↓

Technical Review

↓

SME Validation

↓

Approval

↓

Release

Publication

Maintenance

Revision

Supersession

The technical writer may contribute at multiple stages of this lifecycle.

9. TEAMCENTER AND DOCUMENT CONTROL

Teamcenter can be used within a product lifecycle environment to manage product-related information, documents, revisions and workflows.

Depending on organisational configuration, users may work with:

- Product information
- Technical documents
- Revisions
- Datasets
- Workflows
- Lifecycle states
- Engineering information
- Related product structures

The exact interface and terminology depend on the implementation.

10. FINDING CONTROLLED DOCUMENTATION

Demonstration Scenario

A manufacturing engineer needs the current WC-100 Technical Manual.

Step 1

Open the approved Teamcenter environment.

Step 2

Search for:

TM-WC-100-001

Step 3

Review the returned results.

Step 4

Identify the correct document.

Step 5

Verify:

- Document number
- Title
- Product
- Revision
- Lifecycle status

Learning Point

Finding a document is not enough.

The user must also verify that it is the correct and current document.

11. IDENTIFYING THE CURRENT REVISION

Suppose the search returns:

Document	Revision	Status
TM-WC-100-001	A	Obsolete
TM-WC-100-001	B	Superseded
TM-WC-100-001	C	Released

Question

Which document should the user normally use?

Answer

Revision C, assuming it is the current approved revision for the user's intended activity.

Learning Point

Users should not select a document simply because it appears first in a search result.

12. UNDERSTANDING LIFECYCLE STATUS

Participants should understand the difference between common lifecycle states.

Status	Meaning
Draft	Content is being developed
Review	Content is being evaluated
Approved	Required approval has been obtained

Released Document is available for intended use

Obsolete Document is no longer current

The organisation's configured lifecycle rules always take precedence.

13. DOCUMENTATION REVIEW PROCESS

Technical documentation should be reviewed before release.

A typical workflow may include:

Step 1 — Authoring

Technical writer creates or updates the document.

Step 2 — Technical Review

Relevant technical content is checked.

Step 3 — SME Validation

Technical SME confirms accuracy.

Step 4 — Documentation Review

The technical writer verifies:

- Structure
- Clarity
- Terminology
- Consistency
- Formatting
- Cross-references

Step 5 — Approval

Authorised stakeholder approves the document.

Step 6 — Release

The approved revision is released.

14. CREATING A DOCUMENTATION CHANGE

A documentation change may begin with:

- Engineering change
- Process change
- Product update
- Quality issue
- Customer feedback
- User feedback
- Error correction

Example

Change Request:

Update the WC-100 installation clearance from 10 mm to 15 mm.

Documentation Impact Assessment

Potentially affected documents:

- Product Specification
- Manufacturing Work Instruction
- Technical Manual
- User Guide
- Training Guide
- Knowledge Base Article

Learning Point

A change to one piece of information may affect several documents.

15. REVIEW AND APPROVAL WORKFLOW

The documentation change follows:

Change Identified

Impact Assessment

Document Update

Technical Review

SME Validation

Documentation Review

Approval

Release

Previous Revision Superseded

This approach helps maintain consistency across the documentation set.

16. PRACTICAL EXERCISE 1 — FIND A DOCUMENT

Scenario

You are asked to find the WC-100 Technical Manual.

Task

Search for:

TM-WC-100-001

Participant Actions

1. Open the search function.
2. Enter the document number.
3. Review results.
4. Identify the WC-100 Technical Manual.
5. Record the revision.
6. Record the lifecycle status.

Expected Outcome

Participant identifies the correct controlled document and confirms its status.

17. PRACTICAL EXERCISE 2 — VERIFY A REVISION

Scenario

Three revisions are available.

Revision	Status
A	Obsolete
B	Superseded
C	Released

Task

Identify the revision that should normally be used.

Expected Answer

Revision C

Learning Point

Always verify document status before using technical information.

18. PRACTICAL EXERCISE 3 — IDENTIFY AN OBSOLETE DOCUMENT

Scenario

A colleague sends you a locally saved PDF marked Revision A.

Teamcenter shows Revision C as Released.

Question

Should Revision A be used?

Expected Answer

No.

Correct Action

Access the current controlled revision through the approved system of record.

Learning Point

Local copies may become outdated.

19. PRACTICAL EXERCISE 4 — PROCESS A DOCUMENTATION CHANGE

Scenario

Engineering confirms that a WC-100 product requirement has changed.

Task

Identify the correct documentation workflow.

Expected Sequence

1. Identify Change

↓

2. Assess Documentation Impact

↓

3. Update Affected Documents

↓

4. Technical Review

↓

5. SME Validation

↓

6. Documentation Review

↓

7. Approval

↓

8. Release

↓

9. Supersede Previous Revision

20. KNOWLEDGE CHECK

Question 1

Why should users verify document revision?

Answer: To ensure they are using the current approved technical information.

Question 2

Who should validate technical accuracy?

Answer: The appropriate Subject Matter Expert or technical authority.

Question 3

Should a technical writer silently change incorrect engineering information?

Answer: No. The issue should be raised through the approved review or change process.

Question 4

What should you do if two documents contain conflicting information?

Answer: Do not assume which is correct. Identify the documents and revisions and escalate the conflict to the appropriate technical owner or SME.

Question 5

Why is document lifecycle management important?

Answer: It provides controlled movement of documents through development, review, approval, release, revision and supersession.

21. COMMON MISTAKES

Mistake 1 — Using the First Search Result

Why It Happens

The user assumes the first result is the current document.

Correct Practice

Verify document number, revision and lifecycle status.

Mistake 2 — Using a Local Copy

Why It Happens

The user has a previously downloaded document.

Correct Practice

Use the approved system of record and verify the current revision.

Mistake 3 — Editing Without Technical Validation

Why It Happens

The documentation owner assumes the change is straightforward.

Correct Practice

Obtain SME validation for technical content.

Mistake 4 — Updating One Document Only

Why It Happens

The user does not perform an impact assessment.

Correct Practice

Check all related documents that may contain the changed information.

Mistake 5 — Ignoring User Feedback

Why It Happens

Feedback is treated as a minor issue.

Correct Practice

Review recurring feedback for opportunities to improve clarity, usability and documentation quality.

22. TROUBLESHOOTING

Issue	Possible Cause	Recommended Action
Cannot access Teamcenter	Account or permission issue	Contact system administrator
Document not found	Incorrect search criteria	Use document number or product number
Multiple revisions appear	Historical revisions retained	Verify lifecycle status

Document cannot be opened	Access or file association issue	Verify permissions and system availability
Conflicting information	Different document revisions	Identify current approved source and escalate
Technical content appears incorrect	Possible outdated information	Stop and verify with SME/document owner

23. TRAINER GUIDANCE

Recommended Training Approach

The trainer should:

1. Explain the concept.
 2. Demonstrate the process.
 3. Ask participants to repeat the activity.
 4. Observe the participant.
 5. Correct misunderstandings.
 6. Conduct the knowledge check.
 7. Discuss practical application.
-

Suggested Timing

Module	Duration
Introduction	5 min
Documentation Concepts	10 min
Revision Control	10 min
Teamcenter Workflow	10 min
Practical Exercises	15 min
Knowledge Check	5 min

Discussion

5 min

Total: Approximately 60 minutes

24. LEARNER ASSESSMENT

Participants can be assessed using the following criteria.

Competency	Expected Performance
Document Search	Finds required document
Document Identification	Confirms correct document
Revision Control	Identifies current revision
Lifecycle Understanding	Understands document status
Change Management	Follows correct workflow
SME Collaboration	Understands validation responsibility
Documentation Quality	Recognizes importance of clarity and consistency
Escalation	Identifies when technical issues require SME input

25. COMPLETION CRITERIA

A participant successfully completes the training when they can:

- ☐ Find a controlled technical document.
- ☐ Verify document number and title.
- ☐ Identify the current revision.
- ☐ Understand basic lifecycle states.
- ☐ Explain why obsolete documents should not be used.

- ☐ Follow a basic documentation change workflow.
 - ☐ Identify documents potentially affected by a change.
 - ☐ Understand the role of an SME.
 - ☐ Recognize common documentation-control errors.
 - ☐ Explain when an issue should be escalated.
-

26. QUICK REFERENCE

Before Using a Document

Find → Identify → Verify → Confirm Status → Use

When Updating Documentation

Change → Impact Assessment → Update → SME Review → Approval → Release

When You Find Conflicting Information

Stop → Identify Revisions → Check Controlled Source → Consult SME → Resolve → Document

27. POST-TRAINING CHECKLIST

After completing the training, the participant should be able to answer:

Can I find the document?

- ☐ Yes

Can I identify the correct revision?

☐ Yes

Can I understand document status?

☐ Yes

Can I explain why revision control matters?

☐ Yes

Can I follow the documentation review process?

☐ Yes

Can I identify when SME validation is required?

☐ Yes

Can I recognize an obsolete document?

☐ Yes

Can I identify related documents affected by a change?

☐ Yes

28. RELATED DOCUMENTATION

The following fictional documents form part of the WC-100 documentation ecosystem:

SPEC-WC-100

WC-100 Product Specification

Defines product requirements and technical characteristics.

WI-WC-100-001

WC-100 Manufacturing Work Instruction

Defines a specific manufacturing or inspection activity.

SOP-WC-100-001

WC-100 Product Quality Review and Release SOP

Defines the broader quality review and product release process.

TM-WC-100-001

WC-100 Technical Manual

Provides product, installation, inspection, maintenance and troubleshooting information.

UG-TC-001

Teamcenter Document Access and Revision Workflow

Provides user-focused guidance for accessing controlled documentation.

TR-WC-100-001

WC-100 Technical Documentation and Revision Control Training Guide

Provides structured training on documentation and revision-control practices.

29. TRAINING FEEDBACK

After completing the training, participants may provide feedback on:

- Content clarity
- Training pace
- Practical exercises
- System usability
- Documentation usability
- Areas requiring additional training
- Suggested improvements

Feedback can be reviewed periodically to improve future training material.

30. DOCUMENT LIFECYCLE

This Training Guide should be maintained as a controlled documentation asset.

Review may be required when:

- Training requirements change.
- Documentation processes change.
- Teamcenter workflows change.
- New document-control requirements are introduced.
- User feedback identifies improvement opportunities.

Changes should be reviewed and approved before the updated training guide is released.

31. REVISION HISTORY

Revision	Date	Description	Author
A	30-Aug-2026	Initial demonstration release	Technical Documentation

32. PORTFOLIO DEMONSTRATION NOTICE

This Training Guide is an independently created technical writing demonstration developed for a professional portfolio.

WC-100 is a fictional product.

All product information, training scenarios, document numbers, workflows and examples are fictional or generic representations created solely to demonstrate technical writing and training-content development capability.

The Teamcenter information is intended as a generic demonstration of documentation concepts. It is not an official Siemens Teamcenter training course or product manual.

This document does not contain confidential, proprietary or customer information belonging to any employer or third party.

END OF DOCUMENT

Document Number: TR-WC-100-001

Revision: A

Status: Demonstration Document
