

KNOWLEDGE BASE ARTICLE

WC-100 WEAR LIMIT AND INSTALLATION CLEARANCE — CURRENT REQUIREMENTS

Article ID: KB-WC-100-001

Article Type: Technical Knowledge Base Article

Product: WC-100 Industrial Wear Component

Category: Product / Installation / Maintenance

Audience: Engineering, Manufacturing, Quality & Maintenance

Status: Published

Revision: B

Effective Date: 30 August 2026

Owner: Technical Documentation

Review Frequency: Periodic / As Required

IMPORTANT NOTICE

This is an independently created technical writing demonstration for a professional portfolio.

WC-100 is a fictional industrial wear component. All product information, requirements, document numbers and scenarios have been created solely for demonstration purposes.

The content demonstrates knowledge-base article structure, technical information management, search-friendly writing, user guidance, document control and escalation practices.

This article does not contain confidential or proprietary information from any employer, customer or third party.

1. ISSUE / QUESTION

What are the current WC-100 wear limit and minimum mounting-clearance requirements?

The current requirements are:

Requirement	Current Value
Maximum allowable wear	12 mm
Minimum mounting clearance	15 mm

Always verify the applicable released product documentation before making engineering, manufacturing, quality or maintenance decisions.

2. QUICK ANSWER

Wear Limit

The current maximum allowable wear for the WC-100 component is:

12 mm

Mounting Clearance

The current minimum mounting clearance is:

15 mm

If measured conditions do not meet the applicable requirement, stop the activity and follow the appropriate engineering, quality or maintenance escalation process.

3. WHO SHOULD USE THIS ARTICLE?

This article is intended for:

- Engineering teams
- Manufacturing teams
- Quality personnel
- Maintenance personnel
- Technical documentation teams
- Other authorised users requiring quick access to WC-100 requirements

4. WHEN SHOULD THIS ARTICLE BE USED?

Use this article when you need to quickly confirm:

- Current WC-100 wear limit.
- Current mounting clearance.
- Where to find detailed technical information.
- What to do when measured conditions do not meet requirements.
- Which controlled documents should be consulted.

This article is intended as a quick-reference knowledge resource.

It does not replace the applicable controlled technical documentation.

5. CURRENT REQUIREMENTS

5.1 Wear Limit

Current Requirement

Maximum allowable wear: 12 mm

The wear condition should be assessed using the applicable inspection method and acceptance criteria defined in the controlled technical documentation.

Important

Do not rely on an old locally saved document if it contains a different requirement.

5.2 Mounting Clearance

Current Requirement

Minimum mounting clearance: 15 mm

The clearance should be verified during the applicable installation or inspection activity.

Important

If the measured clearance is below the applicable requirement, do not assume the condition is acceptable.

Follow the appropriate technical or quality escalation process.

6. WHAT CHANGED?

The current revision includes updates to previously published requirements.

Requirement	Previous Value	Current Value
Maximum allowable wear	10 mm	12 mm
Minimum mounting clearance	10 mm	15 mm

The changes are reflected in the associated controlled documentation.

7. WHY WAS THE INFORMATION UPDATED?

The requirements were updated following a fictional engineering assessment of product performance, operating conditions and installation requirements.

The change was managed through a controlled documentation process.

The documentation team reviewed the potential impact on related technical content to ensure that affected documents remained consistent.

8. AFFECTED DOCUMENTATION

The following documentation should be reviewed when detailed information is required:

Product Specification

SPEC-WC-100

Defines product requirements and technical characteristics.

Manufacturing Work Instruction

WI-WC-100-001

Provides applicable manufacturing and installation instructions.

Technical Manual

TM-WC-100-001

Provides detailed technical, installation, inspection, maintenance and troubleshooting information.

User Guide

UG-TC-001

Provides guidance for accessing controlled documentation and verifying revisions.

Training Guide

TR-WC-100-001

Provides training on documentation and revision-control practices.

9. WHERE SHOULD I FIND THE AUTHORITATIVE INFORMATION?

The approved system of record should be used to verify the current released documentation.

Depending on the organisation's environment, this may include:

- Teamcenter
- Windchill
- SharePoint
- Other approved document-management or product-lifecycle systems

The knowledge base article provides quick guidance.

The controlled technical document remains the authoritative source for detailed requirements.

10. HOW DO I VERIFY THE CURRENT REVISION?

Before using technical information:

Step 1

Search using the document number or product number.

Step 2

Confirm the document title.

Step 3

Confirm the revision.

Step 4

Check the lifecycle status.

Step 5

Confirm that the document is approved/released for intended use.

Step 6

Use the current controlled revision.

11. WHAT IF I FIND DIFFERENT INFORMATION?

If another document, printed copy or locally stored file contains a different requirement:

Do not assume which value is correct.

Follow this process:

Stop → Verify → Identify Revision → Check Controlled Source → Consult SME → Resolve

The issue should be escalated to the appropriate technical authority, document owner, engineering representative or quality representative.

12. WHAT IF THE MEASURED WEAR EXCEEDS THE LIMIT?

If measured wear exceeds the applicable requirement:

1. Stop and assess the condition according to the applicable procedure.
2. Do not make an unsupported decision about product acceptance.
3. Record the relevant inspection information.
4. Notify the appropriate technical or quality representative.
5. Follow the applicable engineering or quality disposition process.

The knowledge base article does not replace the applicable inspection, quality or engineering procedure.

13. WHAT IF THE MOUNTING CLEARANCE IS BELOW 15 MM?

If the measured mounting clearance is below the current requirement:

1. Stop the applicable installation activity.
2. Verify the measurement.
3. Confirm that the correct drawing, specification or work instruction revision was used.
4. Escalate the condition to the appropriate technical authority.
5. Follow the applicable approved process for resolution.

Do not modify the requirement without appropriate technical authority.

14. COMMON QUESTIONS

Q1. What is the current WC-100 wear limit?

12 mm maximum allowable wear, subject to the applicable inspection and acceptance requirements.

Q2. What is the current minimum mounting clearance?

15 mm minimum mounting clearance.

Q3. Can I use an older PDF stored on my computer?

Do not rely on an uncontrolled or potentially outdated copy. Verify the current released document through the approved system of record.

Q4. Does this article replace the product specification?

No.

This article provides quick-reference information. The applicable controlled product specification remains the authoritative source for detailed product requirements.

Q5. What should I do if I find conflicting information?

Stop and verify the applicable controlled revision. If the conflict remains, consult the appropriate SME, engineering authority or document owner.

Q6. Who should I contact when technical information appears incorrect?

Escalate the issue through the applicable technical, engineering, quality or documentation process.

15. RELATED KNOWLEDGE

Users may also search for:

- WC-100 wear inspection
- WC-100 mounting clearance
- WC-100 installation requirements
- WC-100 maintenance
- WC-100 product specification
- WC-100 technical manual
- WC-100 revision
- WC-100 inspection requirements

Search-friendly terminology helps users locate the information quickly.

16. DOCUMENTATION GOVERNANCE

Knowledge-base content should be maintained as part of the broader documentation lifecycle.

The article should be reviewed when:

- Product requirements change.
- Engineering changes are released.
- Related documentation is revised.

- Users identify incorrect or unclear information.
 - Processes change.
 - Recurring support questions indicate a documentation gap.
-

17. KNOWLEDGE ARTICLE LIFECYCLE

The article follows a controlled lifecycle:

Create

Technical Review

SME Validation

Approval

Publish

Monitor Usage / Feedback

Review

Update

Republish

18. CONTENT QUALITY CHECKLIST

Before publication, verify:

- ☐ Article title clearly describes the issue.
 - ☐ Search terms are included naturally.
 - ☐ Answer is provided near the beginning.
 - ☐ Technical values are clearly stated.
 - ☐ Related documents are identified.
 - ☐ Revision information is current.
 - ☐ Technical content has been validated.
 - ☐ Instructions are easy to follow.
 - ☐ Escalation guidance is clear.
 - ☐ Obsolete information is controlled.
 - ☐ Links or references are current.
 - ☐ Article owner is identified.
-

19. DOCUMENTATION IMPACT

A change to a product requirement may require review of multiple information assets.

For example:

Engineering Change

↓

Product Specification

Manufacturing Work Instruction

Technical Manual

User Guide

Training Guide

Knowledge Base Article

This demonstrates why knowledge management and documentation governance are important in engineering and manufacturing environments.

20. USER FEEDBACK

Users are encouraged to report:

- Incorrect information.
- Missing information.
- Unclear instructions.
- Broken references.
- Outdated content.
- Frequently requested information that is not currently documented.

Feedback can be used to improve knowledge quality and identify opportunities for documentation updates.

21. TECHNICAL WRITER'S ROLE

The technical writer supports the knowledge article lifecycle by:

- Gathering information from SMEs.
- Translating technical information into user-friendly language.
- Structuring content for quick retrieval.
- Maintaining terminology consistency.
- Performing documentation reviews.
- Managing revisions.
- Coordinating SME validation.
- Maintaining related-document references.
- Reviewing feedback.
- Retiring outdated information.

The technical writer does not independently determine engineering requirements.

Technical accuracy remains subject to the appropriate technical authority and approval process.

22. KNOWLEDGE ARTICLE DESIGN PRINCIPLES

This article follows several knowledge-management principles.

Searchability

The title and content use terms users are likely to search for.

Findability

The key answer is presented near the beginning.

Scannability

Headings, tables and short sections allow users to quickly locate information.

Accuracy

Technical information is presented with clear ownership and revision awareness.

Actionability

The article tells users what to do when requirements are not met.

Maintainability

The article identifies related documentation and review triggers.

23. QUICK REFERENCE

Question	Answer
Current wear limit	12 mm
Minimum mounting clearance	15 mm
Authoritative detailed source	Current released controlled documentation
If information conflicts	Stop and verify
Technical validation	Appropriate SME / technical authority
Knowledge article purpose	Quick, searchable guidance
Does the article replace controlled documentation?	No

24. REVISION HISTORY

Revision	Date	Description	Author
A	15-Aug-2026	Initial article created	Technical Documentation
B	30-Aug-2026	Updated wear and clearance requirements; revised related-document references	Technical Documentation

25. PORTFOLIO DEMONSTRATION NOTICE

This Knowledge Base Article is an independently created technical writing demonstration developed for a professional portfolio.

WC-100 is a fictional industrial wear component.

All product requirements, document numbers, technical values, scenarios and workflows are fictional or generic representations created solely for demonstration purposes.

The Teamcenter, Windchill, SharePoint and document-management references are generic examples and may differ from individual organisational configurations.

This document does not contain confidential, proprietary or customer information belonging to any employer or third party.
